SUMMARY

Hello guys !

I'm currently new in this industry as a developer, being a Chef for 7 years and decided to turn the table around, in the past i'm considered that computer was one of my favorite thing in my life. And being arounded 10 years already. I loved to used Adobe for photoshop for my bussiness, used figma for some cool UI/UX design and i loved to finding something new, such as deploy some of my design, But they just a design, meaning that they didn't really become a real product.

Then, the 2022 was the year i decided to learn programming. The movitation was the fact that i really love to see a beautiful design working well and having may be some of the customers to visit. But that was the main goal then lead me to where i am now. A Front-End Developer.

As a hard-working-learning-doing boy, you can check these projects below and github link for the information. Thanks for reading this far!

THANKS

TECHNICAL SKILLS

- Web Developer:** React JS, Tailwind, Redux, JavaScript, HTML & CSS, Firebase, UX/UI Design, English - Good, Commucation.

Other skills: Communication, Presentation, Self-learning, Team-player, Positive, Love to learning new stuff such as Front-End Framework, or styling this

EDUCATION

Coder School | 11/2022 - Present

Major: Full Stack Developer

- I learned about coding skills such as : HTML & CSS, JS, React JS.
- I learned React JS Eco systems sush as : React Router, Redux.
- Self-learned about : Tailwind css, Sanity, Firebase.

LANGUAGES

English		Fluent

PROJECTS

Project: Movie Dashboard

Time: 2 Weeks

Description:

Tech Stacks

- Javascript

- `Html`
- `Css`

In this first project i am using **Javascript and HTML & CSS** , for the main goal is using **Async fuction** by docs and apply for **fetch data** of the movie api and render out HTML with Javascript method.

code: <https://github.com/Tritintruong114/Javascript-Clone-Dashboard>

product: <https://sfcpj2.csb.app/>

Project: Music Player

Time: 1 Week

Description:

Tech Stacks

- `React JS`
- `Tailwind css`
- `React Router`

In this second project i am using **React JS** and **TailwindCss & React Router**, for the main goal is using **useCustomHook** of React and apply **React Router** for this song player and styled with **Tailwind CSS** as a design chose.

code: <https://github.com/Tritintruong114/Music-Player/tree/master>

product:

<https://sfcpj2.csb.app/>

Project: Movie Dashboard - React JS

Time: 1 Week

Description:

Tech Stacks

- `React JS`
- `Firebase`
- `Tailwind css`
- `React Router`

In this third project,

i used the **Firebase** for the **User Login** and **Logout** and **Register** , as this third party tool like **Firebase** it worked fine for me with this small project and styled with **Tailwind CSS** as a design chose. **React Router** used for **routing** and **changing** page and show detail page with **params** id.

Let's go have look at this ! This is my passion!

code: <https://github.com/Tritintruong114/Movie-Dashboard>

product:

<https://iridescent-taffy-0e81cb.netlify.app/>

Project: Bruno Website

Time: Update

Description:

Tech Stacks

- `React JS`
- `Firebase (Third party)`
- `Sanity (Third party)`
- `Redux`
- `Tailwind css`
- `React Router`

In this fourth project,

This is my personal porfolio, used **React Router for Routing**, and **detail blog**, used **Sanity** for **admin dashboard** to update data with method **CRUD site**.

used Tailwind CSS for styling and **build** with the **design selected.Redux** for fetch data with **asyncThunk** and **update blogs**. **Firebase** for future customer using my website.

code: <https://github.com/Tritintruong114/Portfolio-Bruono>

product:

studio: (login required - admin)
<https://brunoweb.sanity.studio/studio/desk>

Project: Elio the Trader

Time: 1 Month

Description:

Tech Stacks

- React JS
- Firebase (Third party)
- Sanity (Third party)
- Redux
- Tailwind css
- React Router

In this fifth project,

This is my client portfolio, used **React Router for Routing**, and **detail post** , used **Sanity** for **admin dashboard** to update data with method **CRUD site**.

used Tailwind CSS for styling and **build** with the **design selected.Redux** for fetch data with **asyncThunk** and **update blogs**.

Firebase for user **register** and **login** in with **logout**.
